

Finding the Magic Number

M:tG Card Price Analysis
Gavin King, Metis Seattle Fall 2017

Why Magic?

- Oldest and most popular TCG
- Primary market \$200M/year
- Secondary market...?
- Old/rare caps at \$4000
- Cost mostly based on play value

Anatomy of a Magic Card

Data Collection

- Magiccards.info (with prices from TCGPlayer.com)
- Every creature card in the Modern format (i.e. since September 2003)
- 6,432 cards
- Scraped using BeautifulSoup and Selenium

Data Analysis

- Started with simple linear regression
- Refined into Ridge regression with cross-validation
- Plotting errors told an unexpected story

The Model

- Common: \$0.11
- Uncommon: \$0.18
- Rare: \$0.64
- Mythic Rare: \$2.58
- Add 3.75% per year of age
- MSE: \$2.41

Future Work

- This dataset is probably exhausted
- Can advanced NLP read card text and predict prices?
- What's actually done -- look at tournament performance results

Thank you for listening!

Any questions?
